

Actual reality!

Unlike appearance prototypes produced in weak materials, SB3D generate durable, working models in ABS (acrylnitrile butadiene styrene) plastic. Our 3D models can withstand rigorous functional testing.

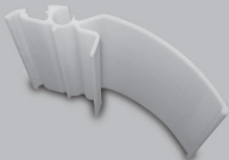

PROOF OF CONCEPTS

We have the capability to produce quick, inexpensive ABS models so you can design multiple concepts. That allows everyone on the design team to review the concepts for real time collaboration on a global scale.

PRODUCT MOCKUPS

SB3D can create mockups of your product within hours. It's an efficient, cost-effective way to catch design flaws and make the appropriate adjustments early and often throughout the design process.

SNAP FIT FUNCTIONAL TESTING

By using ABS models you can test form, fit and function and as many design iterations as you like from packaging through to automotive and aerospace.

VACUUM FORMING

Our ABS models are excellent masters for the vacuum forming process for applications in the automotive, consumer products/blister packs, aerospace and medical industries.

MARKETING TOOLS

Imagine showing a functional model to a new prospect. You're able to place a real-life product into someone's hands in a day. Now that's impressive!

SOLID COLOR

We can provide ABS models in white, red, blue, green, black, gray and yellow. Custom colors may be ordered to make your models as close to the real thing as possible.
